AWARD**

## FURNITURE DESIGN COMPETITION 2002

**Designed by:**  
Tan Bao Chong Anthony  
(Singaporean)

### **BI-CHAIR**

**Bi-chair**, the foldable chair is designed as such that it can be adjusted to various seating heights and tilting angles to suit different seating postures. Alternatively, the seat can be flipped over with the backrest, converting it into a coffee table.

The idea to move and change the look into the new millennium inspired a sleek and futuristic approach in the design. The sleek lines of the chair modernise and yet preserve the contemporary sense in the use of timber as the material.

It is ideal whether at home or for commercial usage as it has simplicity and character which hordes comfort to end user.

No particular theory of design was subscribed where a solution is derived within the parameters of the theory as it inhibits new ideas. This approach is structured from the purest form as it is absolutely original.
